PROFESSIONAL SUMMARY

Skilled back-end developer with deep expertise in server-side logic, database management, and API integration. Proven ability to deliver high-quality, scalable solutions that meet evolving business needs. Strong collaborator, adaptable to fast-paced environments, and focused on driving team success. Proficient in Python, Java, SQL, and cloud platforms. Known for reliability, problem-solving skills, and results-driven approach.

SKILLS

- Software Design
- Cloud Computing
- Software Development
- Advanced SQL
- CI and CD pipeline implementation
- Database Architecture
- Leadership
- Microservices architecture
- Performance monitoring and tuning
- Scalability and high availability strategies

WORK HISTORY

August 2024 - February 2025

Softward Bangladesh - Senior Backend Engineer, Dhaka, Bangladesh

- Enhanced system performance by optimizing back-end code and implementing efficient algorithms.
- Conducted thorough code reviews that promoted high-quality software development practices amongst team members.
- Reduced server downtime by proactively monitoring system health and addressing issues promptly.
- Troubleshoot complex technical issues to identify root causes, developing effective solutions to prevent future occurrences.
- Optimized database queries for faster data retrieval, enhancing the efficiency of various applications.
- Integrated third-party APIs into existing systems for added functionality without compromising performance or security standards.

October 2021 - August 2024

Gain Solutions - Senior Software Engineer & AWS Cloud Engineer, Dhaka, Bangladesh

- Developed and implemented efficient and secure software solutions for an international corporate client
- Designed and maintained database architecture to optimize application performance
- Participated in the design and development of a variety of software applications

- Utilized Agile methodologies to successfully manage software development projects
- Utilized AWS services such as EC2, S3, VPC, and IAM to streamline cloud-based operations
- Developed and managed CI/CD pipelines with GitHub
- Developed HRM solution from scratch with ATS solution

July 2022 - December 2022

Omidnetcare - AWS CDK Developer, Philadelphia

- Implemented security best practices within the AWS environment, safeguarding sensitive data and ensuring compliance with industry regulations.
- Write IaC to deploy infrastructure in AWS
- Developed and maintained CI/CD pipelines using Jenkins, increasing deployment speed and reliability.
- Developed comprehensive strategies for leveraging AWS Auto Scaling, ensuring optimal resource allocation and cost efficiency during periods of high demand.
- Automated daily backups of critical data using AWS S3, reducing the risk of data loss in case of system failures.

October 2019 - October 2021

Ezcorps - Backend Developer, Toronto, Canada

- Utilized AWS technologies to create a highly available and cost effective backend environment
- Developed features and optimized existing code to improve application scalability
- Worked closely with the front-end development team to ensure the smooth integration of the backend system
- Developed a GraphQL API to allow for interoperability between different systems

April 2018 - October 2021

Console IT - Senior Backend Engineer, Sylhet, Bangladesh

- Maintained and monitored backend services and databases to ensure optimal performance
- Developed a RESTful API to allow for interoperability between different systems
- Created a system to automate the deployment process, reducing deployment time by 50%
- Utilized AWS technologies to create a highly available and cost effective backend environment
- Debugged and fixed application issues in a timely manner

June 2016 - April 2019

CRUX - Backend Developer, Dhaka, Bangladesh

- Maintained and monitored backend services and databases to ensure optimal performance
- Utilized AWS technologies to create a highly available and cost effective backend environment
- Worked closely with the front-end development team to ensure the smooth integration of the backend system
